THIS IS UNEVALUATED INFORMATION

50X1-HUM

1. The Vogosca Plant is part of the Kombinat Vojne Industrije (Military Industrial Combine) in Sarajevo, which also includes three other military technical plants; Sarajevo I, Sarajevo II (The Kosevo Pyrotechnic), and Ilijas.
2. The Vogosa Plant was built for the manufacture of tanks, tractors, automobiles, artillery and artillery ammunition. At present approximately 1,200 workers are employed, including those experimenting on model construction. Raw materials come almost exclusively from Yugoslav sources. The ammunition section, the foundry and forge are in operation. The chief product of the plant is armored parts for tanks. Production of an automobile engine was planned to begin in November 1949. The plant operates on electric power from Sarajevo, but utilizes its own thermal power station as a reserve. Equipment used is of German, Czech, Russian and Yugoslav origin.
3. The Ilijas Military Technical Plant, located beyond the Ilijas railroad station on the Samac-Sarajevo line, employs approximately 800 workers in the manufacture of semi-finished products, which are processed for completion in the other plants of the combine. Raw materials are supplied mostly by the Zenice and the Vares Iron Works and the Bor mine. Electric power is furnished by the thermal power plant in Kakanj, while the plant's own power station serves as a reserve. The plant is guarded by the Industrial Militia and by UDB personnel internally, and by the KNOJ externally.
4. The Ratko Mitrovic Military Technical Plant in Cacak is producing three types of Polish radiotelegraphic and telephone sets for the Yugoslav Army. Approximately 1,200 workers are employed. In addition, approximately 400 Army radio mechanics are being trained in the plant school. Electric power is obtained from Cacak and the factory has its own reserve power plant.
